

# B. Planning the Project

## Project Management Life-Cycle

Figure 1 Gantt Chart

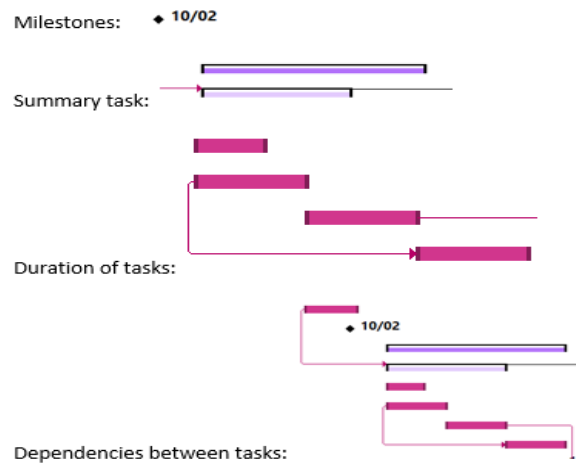

Figure 2 Label for Gantt Chart in Microsoft Project

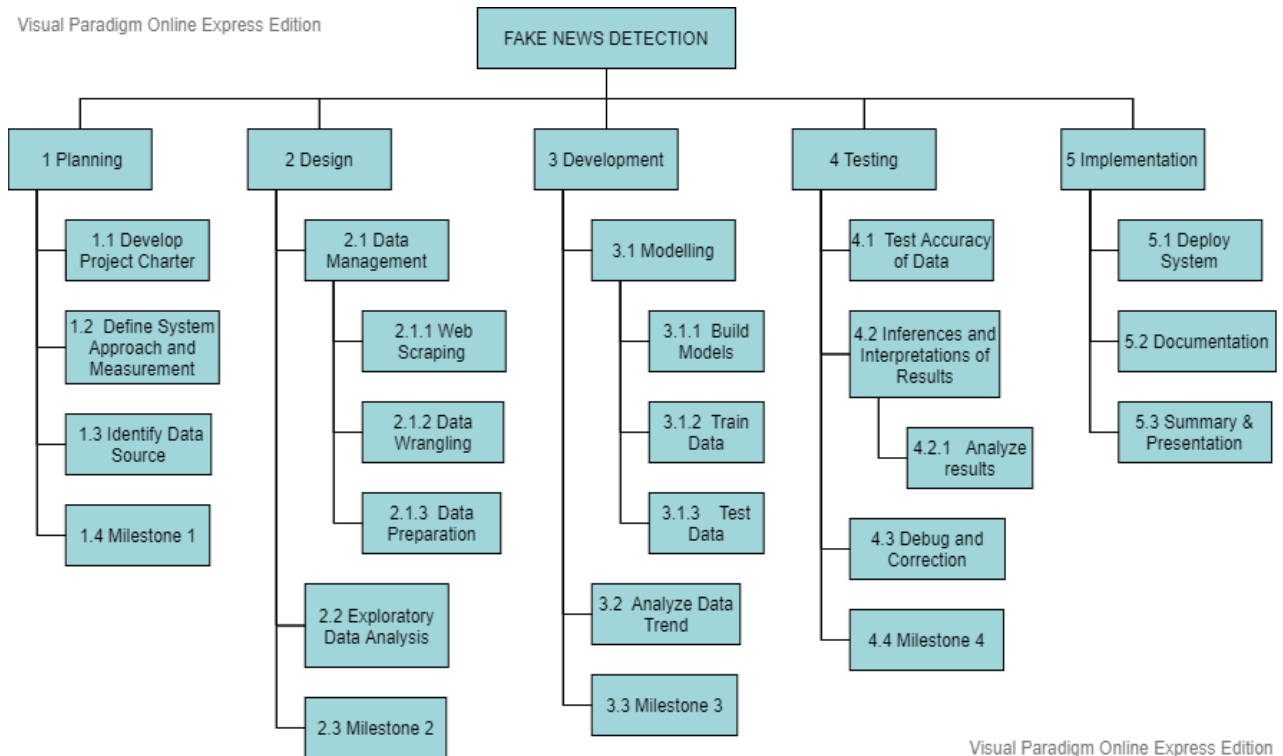

Figure 3 Work Breakdown Structure

## Risk Identification Chart (Quality, Cost, Time)

Control Element	What is likely to go wrong?	How and when will I know?	What will I do about it?
Quality	The system cannot detect the false content accurately	The performance metric for this system is based on the performance execution of the algorithm and if the performance of the algorithm does not perform effectively, the result executed is poor.	Should test the algorithm frequently until the algorithm achieves a good result.
Cost	The project cost spent reaches the budget limit.	By the review of the cost project report. In the case of extra expenditure, the expenses involved reaches the budget limit.	Must ensure that spending are chosen carefully and reviewed frequently to avoid project cost reaches the budget limit.
Time	The testing part is a time consuming and can be a potential for the project deadline to be extend.	The result of the algorithm does not precisely accurate to detect the false content and the project deadline is around the corner.	Try to shorten the critical path project schedule by fast tracking the tasks and crashing the problems. Next, overlaying the plans for the project. Team members should frequently monitor the progress of the project and change the plan by regular opinions.

## Responsibility Assignment Matrices (RAM) :

<b>Resource Responsibility</b>  P - Primary Responsibility A - Approval Authority S - Supporting Responsibility (Contributor or Reviewer) I - Information Only  (Select from drop down list)	Project Manager	Procurement Manager	Risk Manager	Administrative Manager	Financial Analyst	Contract Manager	Project Scheduler	Quality Manager	Technical Manager	System Engineer	Implementation Manager	Test Manager	Configuration Manager	Project Sponsor
<b>Project Funding</b>														
Stakeholder	P	S	S	P	P	I	I	I	I	I	I	I	I	A

Figure 4 Responsibility Assignment Matrices

## Member's roles and responsibilities

Member's Name	Roles	Responsibilities
Elle Aliz	Project Manager	The Project Manager is accountable to the Project Director for all the project management related activities. The Project Manager plans, guides, and oversees the day-to-day internal activities that support the project, and assists in the development of the master project schedule and all other project work plans. The Project Manager is accountable for the development, maintenance, and adherence to the project framework and supporting methodologies that are in compliance with OSI Best Practices and policies.
Gion Min Ming	Procurement Manager	The Procurement Manager oversees and manages the generation of the RFP or RFO and other solicitation documents. Procurement Manager is responsible for integrating all the pieces and ensuring consistency and continuity throughout the entire procurement process and conforming to procurement standards, rules, and regulations. This includes managing the RFP or RFO development, preparing and maintaining procurement schedule, coordinating contract negotiations and managing evaluation of proposals or offers and selection of vendor.
Amirah Nabilah	Risk Manager	The Risk Manager is responsible for managing and tracking risks and risk mitigation/contingencies on the project. The Risk Manager manages and tracks potential and active risks, maintain the risk management tool and documentation information, leads risk identification sessions for the project, monitors prime risk management efforts, and participates in division-level risk management activities for risks that cross project boundaries or are beyond the project's control
Elle Aliz	Administrative Manager	The Administrative Manager directs the administrative staff, coordinates tools and services training, ensures that the administrative staff adhere to processes and policies, leads the

		cost management effort including: sponsoring cost budgeting and tracking activities, facilitating communication on fiscal status, and ensuring the project cost tool and supporting documentation is maintained. The Administrative Manager also provides reports, recommendations, and status on the project budget and expenditures, initiates corrective action, and re-planning activities.
Gion Min Ming	Financial Analyst	The Financial Analyst is responsible for supporting the Administrative Manager by managing and tracking project budget/costs, coordinating/preparing budgetary documents. This includes reconciling the accounting and Work Breakdown Structure cost management processes and developing financial management policies and procedures.
Elle Aliz	Contract Manager	The Contract Manager is responsible for managing, tracking and consulting contracts for the project. This includes negotiating amendments, reviewing work authorizations and invoices, and ensuring that all contractual terms and deliverables are met.
Amirah Nabilah	Project Scheduler	The Project Scheduler is responsible for coordinating and managing inputs to the project plan. This includes tracking progress against project schedule, merging and identifying dependencies and risks between the project schedule, tracking progress on project schedule.
Gion Min Ming	Quality Manager	The Quality Manager is responsible for overseeing and ensuring both product and process quality for the project. The Quality Manager provides insight into the project and methods of doing business by reviewing process and product activities for adherence to standards and plans.
Thitthima	Technical Manager	The Technical Manager is responsible for the day-to-day activities of state and vendor technical staff who are engaged in the technical management aspects of the project. The technical manager and system engineer co-lead in the technical disciplines of the project. One of the key roles of the Technical Manager is to partner with other IT managers to acquire

		appropriate technical assistance for such areas as enterprise architecture, database, software development, security, testing, configuration management, change management, release management, and other technical areas of the new system.
Thitthima	System Engineer	The System Engineer is a co-leadership position with the Technical Manager in overseeing the technical aspects of the project and is a direct support to the Technical Manager. The System Engineer provides industry best practices and disciplines that will be applied and tailored to suit the processes and culture of the state technical environment.
Thitthima	Implementation Manager	The Implementation Manager will be responsible for the implementation portion of the project. The Implementation Manager will provide implementation management leadership through planning, organizing, coordinating, and monitoring implementation activities
Amirah Nabilah	Test Manager	The Test Manager is responsible for coordinating interface tests with other organizations as needed. They plan, monitor, and evaluate test plans, problem reporting and resolution process.
Amirah Nabilah	Configuration Manager	The Configuration Manager is responsible for supporting the Technical Manager by administering the Configuration Management process, coordinating the control of all non-product related configuration items, working with the staff to manage and coordinate the product related configuration items, assisting the System Engineer in maintaining the requirements database, and conducting configuration audits
Elle Aliz	Project Sponsor	The Project Sponsor has overall authority for the project. The Project Sponsor provides vision and direction for the project, provides policy leadership, assists in removing barriers and supports change management initiatives, participates in the Executive Steering Committee, and provides support to the Executive Steering Committee as needed.

## Project Planning Summary:

Modules/Components Budget Schedule Responsibility

Modules/Components	Budget (RM)	Schedule	Responsibility
False content data	3000	13 October 2020 – 13 November 2020	Collect Data
Software environment	400	10 November 2020- 15 January 2021	Development process
