# Glossary of Terms

## **Accuracy**

Accuracy is the condition or quality of being true, correct, or exact.

## **Data wrangling**

An approach to analysing data sets to summarise their key characteristics, mostly with visual tools.

## **Debug**

Debug is the process of detecting and removing of existing and potential errors (also called as 'bugs') in a software code that can cause it to behave unexpectedly or crash.

## **Deploy**

Deploy means bring into effective action.

## **Exploratory Data Analysis**

Knowledge collection, selection, and transformation method to address an analytical question.

## **Fake news**

Fake news is false information in a form of news.

## **Web scraping**

Web scraping is a technique used to retrieve data from websites.
